

Altun Tekstil decided for KRANTZ high-quality machines

Founded in 1993, Altun Tekstil located in Bursa, very soon became a major player in the world of textiles. To keep full control about quality and process they decided to do all manufacturing steps inhouse, starting from the raw material to the finished products. The manufacturing place covers an area of 120.000 m² where only state-of-the-art machines are used.

Due to the very good experience they already had with the existing Krantz machines the decision to continue to rely on Krantz machines was an easy one. For the expansion of the production capacity they bought 6 RAPIDDYE® with a capacity of 500 kg each and 3 yarn dyeing machines for dyeing and bleaching of cross-wound bobbins. These machines have a capacity of 50, 200 and 1.000 kg.
