Dyeing plant with large capacity put into operation at ENA Tekstil

ENA TEKSTIL, a company focused on highest quality and performance, recently launched a project for renewing their machine park in their dye house. After intensive market research they finally decided to choose KTM KRANTZ as a partner for this project and honoured us with a huge order.

In total 25 yarn dyeing machines have been delivered, installed and commissioned in their new dye house in Osmangazi, a district of Bursa. Starting with sampling machines for just one bobbin up to production machines with 1.500 kg capacity they have taken the perfect capacity mix to match their production best. Beside the yarn dyeing machines they have also taken delivery of two pressure dryers with a capacity of 500 kg each.
